

# 1300 PROFILE

Scale 1:1

The 1300 series is a flanged and rectangular profile designed for a recessed linear lighting installation. The 1300 series offers a wide selection of lenses, and LED platforms to choose from for a beautifully finished luminaire with end caps.

## PRODUCT FEATURES

- Motion sensor ready for static white and warm dim options
- Recess into millwork using standard woodworking tools for a 0.75 in. (19 mm) groove
- Stainless steel mounting hardware for integration into most surfaces
- Custom lengths with precision to  $\frac{1}{16}$  (0.0625) inches
- Internal groove guide for easy application of LED strip when field installation is needed
- A selection of lenses to meet task at hand
- Aluminum construction for superior heat dissipation
- UL 2108 listed - Suitable for storage and closet areas

## SUGGESTED APPLICATIONS

- Shelf
- Above cabinet
- Under cabinet

Lumen output tested at 4000K. Use this table to calculate lumen output for different CCTs.

2400K - 0.89	2700K - 0.91	3000K - 0.95	3500K - 0.96	4000K - 1.00	6200K - 1.07
--------------	--------------	--------------	--------------	--------------	--------------

LUMINOSITY CALCULATION EXAMPLE:

According to the above table LPH lumen package with LPR (prime) lens for CCT 4000K has luminosity of 559 lm/ft at CCT 3000K lumen output is 559 lm/ft \* 0.95 = 531 lm/ft

A Class 2 LED driver is designed to deliver a limited amount of electrical power to LED lighting fixtures. It refers to a set of safety standards established by the Canadian Electric Code (CEC) and the National Electrical Code (NEC), which governs the use of low-voltage power sources in buildings.

Class 2 LED drivers are important because they provide a safe and reliable power source for LED lighting systems. These drivers are designed to limit the amount of electrical current and voltage that is delivered to the LED fixtures, which helps to prevent electrical shock hazards and minimize the risk of fire or other electrical hazards.

Additionally, Class 2 LED drivers are typically more energy-efficient than other types of power supplies, which can help to reduce energy consumption and lower operating costs for LED lighting systems.
